17 Mar 2014 . For millions of years, nine species of large, flightless birds known as moas (Dinornithiformes) thrived in New Zealand. Then, about 600 years ago, they abruptly went extinct. Their die-off coincided with the arrival of the first humans on the islands in the late 13th century, and scientists have long wondered.

22 May 2014 . Wellington, New Zealand — Research linking New Zealand's diminutive kiwi with a giant extinct bird from Africa is prompting scientists to rethink how flightless birds evolved. A report published Friday in the journal Science says DNA testing indicates the chicken-size kiwi's closest relative is the elephant.
